About Merlin Search Technologies

Merlin Search Technologies is the developer of DiscoveryPartner, the first full-featured, start to finish ediscovery and investigations platform. It harnesses large language models (LLMs) such as GPT-4 and advanced cloud technologies to transform the way legal professionals search, review and analyze large sets of documents.

Hosted securely in the AWS cloud, DiscoveryPartner employs a unique single-tenant architecture for enhanced security and global site control. Clients can configure resources for each matter, as well as position sites globally (including in one's own AWS environment) for compliance with HIPAA, GDPR, and other privacy regulations.

It's also the first platform to offer On/Off Cloud Utility Pricing, which can reduce hosting costs by up to 60% when clients turn off their sites when not in use, while supporting green computing.

Full-Featured

DiscoveryPartner is built to handle every phase of the discovery lifecycle, from processing and search to analysis, review (including sophisticated CAL workflows), production and user and site management. Administrators can turn sites on and off manually, use the Site Scheduler to set operating (active) hours, and/or the Site Energy Saver utility to automatically shut off sites after a period of inactivity.

AI and LLM-Powered

Powered by Sherlock AI, a set of large language models including GPT-4 and other sophisticated machine learning algorithms working in tandem, DiscoveryPartner slashes the time and costs of traditional discovery workflow, allowing clients to find, analyze and review large documents sets faster and at substantially lower costs than was ever possible using review teams alone.

MERLiN

- **Find:** DiscoveryPartner's algorithmic search engine locates relevant documents in milliseconds, bypassing the need for complex keyword search techniques.
- **Analyze:** Leverage GenAI to analyze, summarize and synthesize across document sets, identifying issues, creating timelines and generating reports.

- **Review:** DiscoveryPartner's AI-integrated review module supports customized review workflow, allowing teams to quickly review, classify and tag large document sets.

- **Save:** Reduce hosting costs by turning sites off when not in use, schedule site operating hours or use the Site Energy Saver to turn off sites automatically when idle.

DiscoveryPartner is sold directly to corporations, law firms, government agencies and court systems, and through a global network of partners.
