

8.2.47 TCDI Software Suite

Through their ClarVergence® Suite (CV Suite), TCDI has created three applications that form the core of their eDiscovery technology offerings. These platforms have the ability to scale up and down, in order to support all litigation needs. For large matters, TCDI created CVLynx® nearly 20 years ago, which supports both case management and eDiscovery. For smaller cases, TCDI's clients can use CVFox®. CVLynx, is designed for large-scale, complex litigation and CVFox, is designed for the small to mid-tier corporations and law firms. CVOnyx®, which has been TCDI's proprietary processing platform since 2009, is used on the backend to perform culling, processing and data preparation for loading to CVLynx or CVFox.

CVLynx is a product of TCDI development, which allows them to customize their flagship product to meet client needs. TCDI focuses on continuous process improvement throughout their development of CVLynx resulting in continual reinvention of strategies to help clients decrease risk during cases, control and predict budgets and ultimately put the focus back on their core business. CVLynx offers counsel across multiple firms and locations the ability to compile, review, research and collaborate in a highly secure, web-based environment. Users have access to a highly customizable central repository that can handle individually unique data and file collection requirements. With CVLynx, TCDI becomes an extension of their clients' litigation support and document production teams.

Chapter 8 – Supplier & Software Details

CVFox, which has the same power as TCDI's flagship product, combines data processing, early case assessment, review and productions into a single, simplified SaaS solution. It is scalable and adaptable, making it sensitive to ever-changing litigation and project needs, allowing users to add new projects or build databases with the click of the button. Due to the minimal setup and training needed in CVFox, users are able to start processing and reviewing data within hours. Once logged in to CVFox users can upload their own data via a drag-and-drop interface that allows for a seamless transition from data processing to early case assessment, review and production, all within one consolidated platform. With CVFox, organizations of all sizes have the comfort of predictable pricing combined the capability to build simple and complex workflows in an easy-to-use solution. CVFox allows administrators immediate insight into their projects with customizable reporting, collaboration tools and powerful visualizations that save time and increase efficiency.
