8.2.28 Lighthouse Technology Solutions

Lighthouse Spectra

Spectra is Lighthouse's powerful cloud-based, user-driven information retrieval, analysis and management platform or eDiscovery and compliance teams. Spectra is ideal for internal investigations and smaller matters where in-house experts are self-sufficient and want access to industry-best tools and capabilities and expert resources available to support and supplement them, as needed. Combining Lighthouse's innovative technology with the processing power of Nuix, the document review capabilities of Relativity, and the imaging finesse of Ipro, Spectra delivers a powerful, scalable, and user-friendly experience. Spectra is deployed in the cloud, providing a scalable, highly available, and secure environment for mission-critical operations.

Lighthouse SmartSeries

Lighthouse SmartSeries is a proprietary suite of technologies and customized workflows designed to reduce your overall eDiscovery cost, risk, and review time, while improving your review team's consistency. They are optimized for Relativity so reviewing attorneys can work efficiently in a familiar environment. Now that's smart.

*Chat*Smart

ChatSmart sets the SmartSeries apart with its unique ability to provide rapid, efficient, and complete review of chat data in many formats, from multiple sources. It combines unmatched innovation, and deep understanding of the particular challenges associated with chat messaging to deliver the only solution you will want to rely on for review of instant message, cell phone, and chat communications.

*Redact*Smart

RedactSmart enhances the SmartSeries by increasing the speed and consistency with which redactions are applied, using programmable pattern recognition to complete hundreds of redactions in minutes.

*Review*Smart

ReviewSmart rounds out the SmartSeries by providing the rapid and efficient disposition of duplicate documents that survive initial family-level deduplication. ReviewSmart analyses a user-defined data set, identifies all document-level duplicates within, and bundles them into unique groups, allowing a single document from each duplicate group to be reviewed and redacted with this coding propagated to its duplicates. Importantly, ReviewSmart can then analyze these duplicates and their families to identify and alert the user to coding inconsistencies that may require attention.
