<u>Company Description</u>	
<p>LTI specialises in helping customers solve their digital evidence data challenges. When data is needed to answer legal questions arising from regulatory investigations, disputes, or other business challenges, LTI deploys the best experts and technology so that our customers can make informed decisions.</p> <p>Our digital forensic and eDiscovery experts are located in the UK and Continental Europe. They assist lawyers working on competition, disputes, tax, and contentious mandates.</p> <p>We provide our customers with one-off project solutions, great for lawyers who have the occasional forensic/eDiscovery need. Clients who have a continuous flow of mandates requiring non-stop forensic/eDiscovery support benefit from tailored services to suit their needs.</p>	
<u>Vendor Offerings</u>	
<p>LTI provides customers with end-to-end digital forensics, eDiscovery, eSearch and data challenges services.</p> <p>Our experts anticipate, question and provide proactive solutions.</p> <p>The technology solutions we deploy are best in class, packed with AI and machine learning features. Our customers can either “pay & go” or have fixed terms usage models spread over a year. The tech is either hosted in our purpose-built environment or deployed on-site.</p>	
Data Collections and Preservation	
<p>When data and documents need to be obtained as evidence, LTI’s consultants have the skills needed to collect and preserve.</p> <p>By questioning and interviewing, we set out to learn how and where documents are stored. Creating clearly defined protocol’s, provides our customers with an understanding of the processes.</p> <p>LTI's Data Collection and Preservation services include collecting data from laptops/computers, email systems, mobile phones, social media platform, servers, websites and cloud applications.</p>	
eDiscovery for Litigation or Investigations	
<p>When a lawyer is handling a legal dispute or regulatory investigation, research into their clients' internal data/documents will have to be conducted before a defence/statement can be drafted. This exercise often involves an eDiscovery process, comprising thousands of documents.</p> <p>LTI’s eDiscovery consultants make this process as pain-free as possible. Combining our 20 years plus experience and using the latest cutting edge eDiscovery technology, ensures that each phase of an eDiscovery exercise can be conducted with skill and precision.</p>	

Our eDiscovery technology solutions can be deployed from within your organisation or using LTI's secure data centres situated around Europe (your access is gained over the internet).

LTI's document search and review platform is powered by Reveal, which also has the world's leading AI/Machine Learning applications (NexLP and Brainspace) integrated into it.

Our consultants work when you need them.

eDiscovery technology can be purchased monthly, project by project (no long term contracts). Customers who have a continuous supply of mandates will benefit from annual, bespoke packages.

Data Subject Access Request (DSAR)

Our DSAR offering provides customers with the technical capability to reduce the cost associated with handling DSAR's.

Working with our customers, we create a DSAR PlayBook, which details how to identify, review and produce responsive document sets.

Combining LTI's consultancy and document review platforms, ensure that an efficient and auditable workflow can be designed.

Exit Lever Strategy

Employee Leaver/Exit Strategy is a preventive program created by LTI to ensure that your organisation can proactively handle potential risks, business and regulatory challenges even after key people leave.

Our consultants work with you to make sure that your company is best prepared to deal with critical situations and events where data and documents from current and former employees are needed.

Your company's data is the lifeblood of your organisation. We help ensure it can be used to add value.

#MeToo Incidence Response

#MeToo Incidence Response is a service offered by LTI to help companies collect qualitative and relevant data concerning harassment incidents.

LTI has gained vast experience dealing with delicate corporate investigations, thus allowing us to offer a #MeToo Incidence Response service. Our service is empathic, discreet and impartial, which is needed when faced with employee document evidence-gathering exercises.

Proactive Compliance Monitoring Technology and Consulting

The proactive compliance monitoring is a service that allows a company to monitor for business risks in real-time.

LTI's consultants work closely with our customers to analysis which systems are in use and implement the technology and workflows which are suited to the environment and needs. Our flexible approach allows companies to adjust the monitoring method on the fly.

Data Remediation

LTI's data remediation service can be deployed to solve many data challenges. In essence, we work with our customers to identify data and document sets of interest, within an IT estate. Then take the necessary actions to isolate, remove and provide the data and documents.

Typical situations we help clients with:

A customer is maybe interested in migrating to a new IT environment or want to remove/cull non-business data, conduct a Rot Analysis.

A regulatory demands a business identity, remove/destroy certain information.

A company is selling-off an area/part of their business and they need to provide the buyer with all the necessary data.

CORE SOFTWARE TOOLS:

Data Collections/Acquisition and Forensic analysis software. Supporting the collection, preservation and analyse of source data/evidence:

Forensics Explorer | FTK | Caine | Deft | Paladin | Mobile Edit | Magnet | Google Vault | Microsoft Compliance | MetaSpike | Oxygen Forensics

Data Processing and Document Review Software.

Reveal Discovery Manager is the software we use to extract metadata, identify duplicates and make non-search files searchable. It also prepares data for loading into the document review platform. This software is installed on all datacentres and can be deployed at a client's site/office.

Reveal is our document review platform software. The document review platform allows for a single person or a team of people to search, review and classify documents in a collaborate fashion. Reveal is deployed in all datacentres and can also be installed at a client's site/office.

Brainspace is used for advanced data analytics, data insights and predictive coding/coding exercises. Brainspace is installed in all datacentres and integrates within the Reveal document review platform.

NextLP provides real AI and machine learning/natural language processing, allowing our customers to detect emotional and behavioural patterns. The learning/work product created on a project can be re-implemented on new mandates, thus allowing lawyers to build powerful AI models. NextLP is installed on all datacentres and integrates within the Reveal document review platform.
