Company Description

IPRO is a global leader in the development of advanced eDiscovery software and information governance for law firms, corporations, government agencies, healthcare organizations, and legal service providers. Founded in 1989 and based in Tempe, Arizona, IPRO is known for its best-in-class information governance, eDiscovery, and trial presentation solutions that deliver early data assessment (EDA) as well as real-time, hold-in-place data preservation, analytics, and review.

With 280 employees, IPRO is able to serve over 2,000 customers globally including US, Canada, the Netherland, the UK, and Germany. In 2021 IPRO launched Live EDA the only search in-place solution that enables legal teams to respond to their matters in a fraction of the time by conducting Early Data Assessments on live data where the information lives, before any collection occurs.

Vendor Offerings

IPRO offers end to end software solutions that help legal teams reimagine and more effectively complete the EDRM process by improving information governance and streamlining data collection, processing, review, and analysis as well as trial presentation:

IPRO's Information Governance solution provides organizations with a comprehensive platform to manage their volumes of data and comply with all relevant regulations.

IPRO's wide range of eDiscovery tools support legal teams from effective **LEGAL HOLD** solution that empowers organizations to avoid sanctions and data spoliation by automating their legal hold process, all the way to the **collection, processing, and review stages** of the EDRM.

IPRO's In-place search solution (**Live EDA**) helps legal teams **identify and locate relevant data across various sources by performing searches in real time before collection even begins reducing ESI collected by 90%**. Live EDA compiles this information into a comprehensive content index that tells legal teams where information lives, why it's there, how long it's been there, and who can access and modify it. That index can assist in the eDiscovery process and give valuable insights into how organizations can better manage its data going forward. Legal teams can significantly reduce the amount of document they collect, process, review, and analyse making the process much faster, thorough, and efficient. They can then add new custodians or data sources to expand their inquiry at any time without having to restart the search process.

OPEN DISCOVERY and ZylabOne platforms combine analytics and artificial intelligence (AI) to help legal teams in law firms and corporations to organize ESI, reduce data volume, and search data efficiently to optimize every step of the EDRM process.

Trial Director 360 is a comprehensive trial presentation software that optimizes and speeds up case preparation and presentation process. Legal team can manage case evidence quickly and effectively and create powerful multimedia presentations to win cases.
