Company Description

GoldFynch is a cloud-based SaaS platform for eDiscovery. It's used by law firms, corporations, and other eDiscovery firms across the US. It is owned and developed by Mazira LLC based out of Iowa City.

Mazira was founded by a small, dedicated team of engineers that takes pride in what they do. They got their start building search engines, but adopted that technology into a subscription based ediscovery review service. As a newcomer and underdog in the space, they've held our own by focusing on customer needs and great technology. Costs are kept low by creating a great customer experience through no-friction interfaces and a highly automated back end.

GoldFynch offers very affordable eDiscovery and levels the playing field for smaller firms, all with a zero-learning curve. Built from the ground up, GoldFynch prides itself on delivering exceptional user experience, affordable pricing, unrivalled file type support, and bank grade security. GoldFynch runs on the cloud and has no user fees, allowing for collaborative eDiscovery wherever you are. There is no barrier to entry. Pricing is transparent and available on the GoldFynch website.

Vendor Offerings

GoldFynch eDiscovery: Provides easy drag and drop uploads of any file type and any size. Includes automated file processing and state-of-the-art OCR which comes standard with all case plans at no additional cost. Searches, review, productions, and users are all included in the single transparent pricing. GoldFynch is intuitive, having an interface which is modern, rich, and carefully designed. Learn More: https://goldfynch.com/

GoldFynch PST Viewer: GoldFynch's free online PST viewer lets you analyze PST files using your web browser, but without uploading the PST files to a server. All the processing and analysis is done in the browser, so no need to load them into Outlook or to an eDiscovery file processor. Learn More: https://goldfynch.com/goldfynch-pst-viewer

GoldFynch PST Analyzer: Similar to the PST viewer, the PST analzer is a Free web browser based tool that detects and reports issues with PST or OST files. Learn More: https://goldfynch.com/goldfynch-pst-analyzer
