Company Description

*Founded in 2021 by Sergey Demyanov, Maksim Ivanov, and a third co-founder (operating currently in stealth mode), **Beagle** is an AI-native platform for e-Discovery that simplifies the processes of document collection, analysis, and exchange within legal disputes and investigations. Conceived and developed by a team of cross-industry professionals, **Beagle™** offers a powerful, elegant, and user-centric e-Discovery solution that eliminates pain points and enables efficiency. “Cruelty-Free eDiscovery”™ is Beagle’s tagline and the northstar for **Beagle™** founders in making all key design and functionality decisions.*

Vendor Offerings

Beagle™ implements cutting-edge AI capabilities powered by the latest LLMs and operated via a user-centric UX/UI, to offer a solution that maximises review efficiency and minimises user frustration. **Beagle™** is unlike any of its competitors because it does not attempt to tack-on AI-features to old products, but rather re-envision eDiscovery ground-up using the power of large ChatGPT-like language models. As a result, **Beagle** offers unmatched power, greater flexibility, and a much smoother user experience.

Beagle’s novel offerings include:

- **Beagle Autotagging:** Reliably identify responsiveness and issues, minimising the need for attorney review.
- **Cruelty-free e-Discovery™:** Intuitive, user-driven software, with easy solutions and an approachable design.
- Unprecedented search quality, including natural language question-answering along with citations to real, verifiable evidence.
- Search results that logically group related documents as a document reviewing attorney might (e.g., related emails, discussions concerning a subject across communication platforms, near duplicates, etc.).
- Automatic generation of privilege logs, identification and isolation of links embedded in documents, and other time-saving features.
- A transparent price that provides savings and certainty to litigants and their counsel teams.
