

Vendor Information

Vendor Name: Law In Order Pty Ltd	 LAW IN ORDER
Contact (name), phone number, email. Murali Baddula, Chief Digital Officer cell: +61466 999 144 e: murali.baddula@lawinorder.com	
Address Level 3, 123 Pitt Street, Sydney, NSW 2000 Australia	
Company Website: www.lawinorder.com	

Software Information

1.eDiscoTech™ automates most of the day to day, repetitive tasks in the eDiscovery workflows. 45 different functionalities are captured in one simple button click that anyone can use. Benefits include: migrating load files between review platforms, e.g. Relativity, Nuix Discover; a structured format for viewing and editing load files; extracting text from multiple file types; resizing, combining, pagination and branding of PDFs, and formatting to comply with exchange protocols.

eDiscoTECH™ is designed to automate most of the day to day, repetitive tasks in the eDiscovery workflows. 45 different functionalities are captured in one simple button click that anyone can utilise.

Flat File Viewer views the load files created by eDiscovery Platforms such as Relativity and Nuix Discover.

Load File Application has automated the data wrangling associated with loading files to the review platform. A recent update to eDiscoTECH™ now includes the ability to create load files that support PDF import and exports into both Relativity and Reveal.

Hyperlink Tools assist with hyperlinked indexes, hyperlinked court and appeal books, automating hyperlinking tasks and link verification for Excel, Word and PDF indexes.

eDiscoTECH™ also allows users to put shortcuts in a folder and apply them in the eDiscoTECH™ app settings. User can open external apps from within eDiscoTECH™.

2.PDFPrimer™ is an efficient digital tool that assists with document exchange, document review, document production, eDiscovery, electronic compilation, and hard copy printing. It’s a breakthrough app rendering files to PDF format, supporting 85 different file extensions, compared to a 3rd party app previously used by Law In Order of 15. It renders spreadsheets, Word documents, PowerPoint presentations, drawings such as maps or plans, and emails and their attachments.

It is used by legal tech and forensic investigators. It migrates documents into Relativity, Nuix and other eDiscovery platforms. It enables document production and exchange with opposing counsel and prepares court books for an eHearing.

eDiscoTECH™ and PDFPrimer™ are sold globally, testimony to the impact our innovations are having on the industry worldwide.

3.Aconex Data Collector supports clients in construction project disputes. It's customised to ensure seamless digital collection, making the data readily available for further investigation in either Nuix Logical Evidence or Relativity Load file format. There has been a recent surge in construction project disputes. In such disputes, the traditional approach of manually gathering files from Aconex managed projects comes with inherent risks - Aconex is the predominant construction software collaboration tool. Vital metadata can be lost, and communication threads might be disrupted, not to mention the considerable time and inefficiency involved in this process.

Law In Order has pioneered a cutting-edge solution, revolutionising data collection to deliver a swift, seamless, and efficient review process. It's a tailor-made tool that seamlessly gathers digital information, ensuring data remains intact and accessible for subsequent investigation, either in the **Nuix Logical Evidence** or **Relativity** Load file format. It facilitates the collection of Documents, Transmittals, and Mails from Aconex. The collection process is meticulously structured, allowing us to collect Document and Mail/Transmittal stores either as cohesive units or as separate entities. To ensure utmost accuracy for data size and quantity of documents, emails, and their attachments, clients provide essential information such as the API Key. By enabling API functionality, a request to Aconex delivers a straightforward process. Law In Order guarantees the completeness of the data collection process.

Law In Order continues to develop and offer solutions to make electronically stored information available for search, retrieval and review in a legally defensible manner.

4.Smart DeDuper

Law In Order has significant experience with uncommon data types which can derail a project and inflate costs. With Smart DeDuper, we built a tool that allows us to address these scenarios smoothly and without delay or additional costs to our clients.

Users can tag unique, master and duplicate documents based on an individual item or a family group of items. A fully customised and user-friendly interface function helps users to review the duplicates and QA the inconsistencies. This helps remove messaging duplicates not only on standard email software but also on collaborative systems such as shared whiteboards, interactive chat, meeting and conference software, etc.
